

HKE Hexagonal Water Generating Titanium Ingot

HKE-W036

The HKE hexagonal water generating titanium ingot is a simple hexagonal water generator designed for personal and family use. The users only need to put the titanium ingot into a stainless steel kettle and boil it with clean water. The boiling hot water becomes long-acting hexagonal water, also known as structured water. Pure titanium is currently recognized as the safest material for tableware.

The HKE energy fluid developed by our company for many years is injected into the titanium ingot. Then use high-temperature pure titanium self-fusion welding method to seal. Finally, use polishing and color carving by laser engraved as the finishing step. After the temperature treatment of the titanium ingot, the titanium dioxide on the surface is also thickened to form a protective film, also known as a gem film, which naturally produces the photocatalyst effect of titanium dioxide, and can quickly decompose bacteria.

Why Hexagonal Water is Important to Health

Water is what we depend on for every bodily function and ultimately for survival. When a baby is born, water in its body cells is a hexagonal ring-like cluster, also called structured water or small molecule cluster water. This is why the baby's skin is tender and full of vigor.

As one grows older, the human body begins to lose hexagonal structured water or in its cells and DNA. At the age of 58, only 23% of the water in the body is structured water. The loss of hexagonal structured water will affect the body's metabolism, skin complexion and circulation, healthy immune system, and detoxification. More and more harmful substance accumulates in the body and one becomes aging and even gets a disease.

"Aging is a loss of Hexagonal Water from organs, tissues and cells, and an overall decrease in total body water. Replenishing the Hexagonal Water in our bodies can increase vitality, slow the aging process, and prevent disease". Jhon, M.S., The Water Puzzle and the Hexagonal Key

If water can retain the memory of pollutants, and the memory can survive the filtration and chlorine treatment of the water plant, then we may provide our body cells with a lot of bad information.

In 1991, the physicist Dr. Wolfgang Ludwig (Wolfgang Ludwig) proved that water has memory. It can store frequency, and transmit coherent information to organisms. (Source: Environmental Medicine, edited by Trevin & Taalkenhammer, 1991)

Water treated by HKE physical resonance (Hexagonal Water Generating Titanium Ingot), the water molecules crack into very small water molecule clusters and **bad pollutant memories are removed as well**. Each molecule cluster is made up of an average of six symmetrically organized molecules. The water's NMR half-width is less than 70Hz. (NMR data of longevity village water around the world is average at 90Hz).

The minuscule cluster is recognized by cells as "bio-friendly" because of its hexagonal structure, making it impossible for toxins to spread within the cluster. The hexagonal water also has the superior characteristics of low pressure, strong kinetic energy, and high dissolved oxygen. It can quickly penetrate the cell membrane channel and then use electrons to transmit information into the cell nucleus to promote cell activation and proliferation, accelerate metabolic regeneration. It is also helpful to people with constipation, hyperuricemia, gout, and can effectively enhance the body's immunity.

"Hexagonal Water is found surrounding healthy DNA, whereas unorganized water is found surrounding the DNA of diseased tissue." - Jhon, M.S., The Water Puzzle and the Hexagonal Key

How HKE (Hydrogen Kinetic Energy) Works

After continuous research, improvement, and test by the HKE R&D team in Taiwan, the core catalyst of HKE has finally been able to mass production in limited quantities. The energy fluid in all HKE physical resonance equipment made by the core catalyst contains basic elements, protons and electrons.

The energy of protons comes from the far-infrared emissivity of the sun, and the electrons are affected by the gravity of the earth's rotating magnetic field. After the two collide, they spontaneously rotate to generate resonance energy.

Under the effect of this resonance, the molecules of the water-containing substance are miniaturized. HKE energy fluid induces the hydrogen bond break between water molecules and destroys Van der Waals Force, thereby maintaining the water molecule clusters in a smaller form. Then use pure titanium or 316L stainless steel or to completely cover it.

The most important is that the generator does not need to be powered, heated, condensed, gasified, or added any additives during the whole process.

How to Use

Put the HKE hexagonal water generating titanium ingot into the kettle and boil it with clean water. The boiling hot water becomes hexagonal water, also known as structured water. It is recommended that stainless steel is the best material for the kettle. After many tests, pure titanium or stainless steel has the best resonance effect. The boiled hexagonal water will continue to resonate in the kettle. Besides, the water after the HKE resonance is long-acting hexagonal water with small water molecules. The water molecule clusters will not be restored even leaving the kettle. The experiments have proved that they can last for more than 72 hours.

You can also put The HKE hexagonal water generating titanium ingot into the portable thermos (stainless steel liner is recommended). Or placed in a liquid that needs resonance, such as various pure wines (for sobering alcohol), lemon juice, liquid enzymes or fruit vinegar etc. (Beer and sparkling drinks are invalid).

Recommendations for use:

It is not suitable to be heated and boiled for a long time in an electric thermos. Repeated boiling will cause the mineral ions in the water to be absorbed by the titanium ingot, which will affect the resonance efficiency, and will damage the gem film for a long time, causing the color of the carving to fade and lose its dazzling luster.

Mechanical Specification

Material	Pure titanium rare metal, non-alloyed titanium
Dimension / Weight (N.W.)	Diameter: 3cm; Thickness: 0.6 cm/ 15g
Color by laser engraving	High temperature laser, titanium dioxide produces gem film; color carving will never fade under normal use; non-toxic and harmless
Cleaning Method	After using for a period of time, it is recommended to wash with clean water after use and then wipe with a clean dry cloth regularly
Half-life Period	Over 10 years
SGS Non-Radioactive Test	Compliant with Non-Radioactive Contamination at International level (Report # KK-19-07339)
